DETAILED ACTION

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-13, 21, and 22 drawn to an armature winding with three coils and subcoils, classified in class 310, subclass 198.
 - II. Claim 14-20 and 23-30, drawn to stator/rotor commutation through neutral zones, classified in class 318, subclass 726.
2. Inventions Group I and Group II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, the armature of group I can be used on other machines with out the commutation in the neutral zone of Group II. An the commutation of the invention of Group II does not require the three coil armature of Group I. See MPEP § 806.05(d).
3. Because these inventions are distinct for the reasons given above, because the inventions of Group I and II have acquired a separate status in the art as shown by their different classification; and because the three coil armature search required for Group I is not required for Group II, AND the commutation search of Group II is not required of Group I, therefore the restriction for examination purposes as indicated is proper.
4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
